Stages of care

Care while pregnant (antenatal care)

Care provided in the hospital and the community

Ratings of 'care while you were pregnant (antenatal care)' were similar to the national average. The highest-scoring question related to the receipt of information on giving up smoking while pregnant. The lowest-scoring question related to the receipt of information about changes in mental health.

Care during labour and birth

Care provided in the hospital

Ratings of 'care during labour and birth' were about the same as the national average. The highest-scoring question for this stage related to involvement of a partner or companion. The lowest-scoring question related to the involvement of women in decisions about care during labour and birth.

Care in hospital after the birth

Care provided in the hospital

Ratings of 'care in hospital after the birth' were about the same as the national average. The highest-scoring question related to being told who to contact after discharge. The lowest-scoring question related to 'debriefing' and the opportunity for women to ask questions about their labour and birth after the baby was born.

Specialised care*

Care provided in the hospital

74% of women said that they had a very good overall experience of the care their baby received in the neonatal unit in Portiuncula University Hospital, compared with 70% nationally.

Feeding

Care provided in the hospital and the community

Ratings of 'feeding' were about the same as the national average. The highest-scoring question related to respect for decisions about how women wanted to feed their baby. The lowest-scoring question related to support and encouragement provided to women with feeding their baby while in hospital.

Care at home after the birth

Care provided in the community

Ratings of 'care at home after the birth' were about the same as the national average. The highest-scoring question related to being treated with respect and dignity at home after the birth. The lowest-scoring question related to the time spent by the GP practice nurse/midwife discussing mental health at the 6-week check-up.

About the National Maternity Experience Survey

The National Maternity Experience Survey offers women the opportunity to share their experiences of Ireland's maternity services. The survey is part of the National Care Experience Programme, a joint initiative by the Health Information and Quality Authority (HIQA), the Health Service Executive (HSE) and the Department of Health. The National Care Experience Programme seeks to improve the quality of health and social care services in Ireland by asking people about their experiences of care and acting on their feedback. The survey reflects a commitment made in the National Maternity Strategy 2016-2026 to evaluate maternity care services from the perspectives of the women who use them.⁽¹⁾

The survey questionnaire contains 68 questions which capture the whole maternity pathway from antenatal care, through labour and birth, to postnatal care in the community. The National Maternity Experience Survey includes questions taken or adapted from a library of questions developed by the National University of Ireland, Galway (NUIG) in collaboration with the National Care Experience Programme. More information on the survey design can be found at www.yourexperience.ie/maternity/about-the-survey.

The aim of the survey is to learn from the experiences of women to improve the safety and quality of the care that they and their baby receive. HIQA, the HSE and the Department of Health have committed to acting on the findings of the National Maternity Experience Survey to improve the quality of maternity care services in Ireland. Quality improvement plans have been developed by the HSE at national and local levels to address the issues highlighted in the survey.

About this report

This report focuses on the experiences of women who gave birth in Portiuncula University Hospital. In Ireland, maternity care is provided by a mix of hospital-based and community-based services. This report includes women's experiences of the care provided both in Portiuncula University Hospital, and by general practitioners and public health nurses based in the community.

What were the findings for women who gave birth in Portiuncula University Hospital?

The majority of women who gave birth in Portiuncula University Hospital said they had a positive overall experience. 89% said their maternity care was good or very good, which is higher than the national average. The hospital scored close to the national average for each stage of care.

54% of women who gave birth in Portiuncula University Hospital said that they were offered a choice of the type of maternity care they would receive. Options included public care, consultant-led private or semi-private care, DOMINO and community midwifery care.

Most women said that they received enough information about nutrition and about the impact of alcohol or drug abuse during their pregnancy. These questions scored above the national average. In addition, most women said that their GP or practice nurse answered their questions in a way that they could understand.

The lowest-scoring questions for Portiuncula University Hospital related to the emotional support women received while their baby was in the neonatal unit, with some women saying that they did not receive sufficient emotional support. In addition, some women said that they did not receive sufficient information about changes in their mental health while they were pregnant. Finally, a number of women said that they were not given the opportunity to ask questions about their labour and birth.

The responses to the three free-text questions provided very detailed information on women's experiences while in Portiuncula University Hospital and the maternity care they received in the community before and after giving birth. These comments identified the caring and helpful attitudes of health care professionals, particularly in the antenatal stage, but also highlighted the difficulties that some women experienced in accessing help when they needed it.

Who took part in the survey?

238 women who gave birth in Portiuncula University Hospital in October and November 2019 were invited to participate in the survey. 106 women completed the survey, representing a response rate of 44%.¹ Table 1 provides information on the characteristics of the women who gave birth in Portiuncula University Hospital who responded to the survey. 41% of the women who gave birth in Portiuncula

¹ It is important to note that the Covid-19 pandemic may have had an impact on the number of survey responses received. However, the women who were invited to take part gave birth prior to the pandemic and the maternity care they received was thus unlikely to have been affected.

University Hospital said that they lived in Galway, with the remainder spread across several counties.

Interpreting the results presented in this report

In this report, scores out of 10 are given for relevant questions belonging to a stage of maternity care or to a stage as whole. A score of 0 indicates a very negative experience and a score of 10 indicates a very positive experience. Some questions simply provide descriptive information and these questions are not given a score out of 10.

Statistical tests were carried out to examine if there were significant differences between the scores for specific groups, for example, for people who gave birth in Portiuncula University Hospital, and the national average. Throughout this report, when the hospital scored significantly above the national average, this is described as 'higher'. When the hospital scored significantly below the national average, it is described as 'lower'. When there is no statistically significant difference between the hospital's score and the national average, it is described as 'about the same'. For more information on the analyses please consult Appendix 3 of the 2020 national report, available at www.yourexperience.ie.

There were three free-text questions in the survey which asked women about the positive aspects of their experiences and where improvements were required. Quotations from women are presented in a dedicated chapter. These quotations have been redacted to remove any information that could identify an individual.

Experiences of maternity care for women who gave birth in Portiuncula University Hospital

Areas that scored above or below the national average

Using a methodology set out in appendix 1 this section lists the questions where women who gave birth in Portiuncula University Hospital rated their experiences significantly above or below the national average. It is important to note that even for questions that scored significantly above the national average, there is still room for improvement. The list includes the relevant stage of care and question number for each area.

Areas that scored above the national average

Care while pregnant (antenatal care)

Information about nutrition while pregnant | Q10.

56 (52.8%) of the 106 women who answered this question said that they definitely received enough information about nutrition during their pregnancy.

Care while pregnant (antenatal care)

Information about alcohol and/or drug abuse while pregnant | Q12.

66 (82.5%) of the 80 women who answered this question said that they definitely received enough information about the impact of alcohol or drug abuse during their pregnancy.

Care at home after the birth

Clear answers from the GP or practice nurse/midwife | Q53.

83 women (82.2%) said that they always received answers they could understand from their GP or practice nurse/midwife.

Areas that scored below the national average

In Portiuncula University Hospital, the scores for all questions were above or the same as the national average. While no specific areas for improvement were identified using the methodology outlined in Appendix 1, there was still room for improvement on a number of questions. Participants' comments also identified areas where improvement was possible.

Care while pregnant (antenatal care)

The first seven questions for this stage asked women to provide information about the first health care professional they contacted when they knew they were pregnant, the types of maternity care they were offered, and whether they attended antenatal classes or courses. The results for these questions are presented in Tables 2 and 3. A description of the types of maternity care is provided in Appendix 2.

The remaining 10 questions asked about the information and support women received during their antenatal care. These questions were scored out of 10, with the scores for the stage as a whole compared against the national average in Figure 2, and compared by participants' county of residence in Figure 3. The scores for the individual questions are compared against the national average in Figure 4.

It is important to note that the questions for this stage of care relate both to care provided in the community and care provided in Portiuncula University Hospital.

Table 2. Number of births and first healthcare professional contacted.

Q1. In your most recent pregnancy, did you give birth to...		
	No.	%
A single baby	104	98.1%
Twins	2	1.9%
Triplets, quads or more	0	0.0%
Q2. Who was the first healthcare professional you saw when you thought you were pregnant?		
GP / family doctor	101	95.3%
Midwife	1	0.9%
Other	4	3.8%

57 women (53.8%) who gave birth in Portiuncula University Hospital said that they were offered a choice of maternity care, while 32 (30.2%) said they were not offered any choices. Figure 1 shows the choices of maternity care that were offered to women and the type of care that they actually received.

Figure 1. Types of maternity care offered and received in Portiuncula University Hospital.

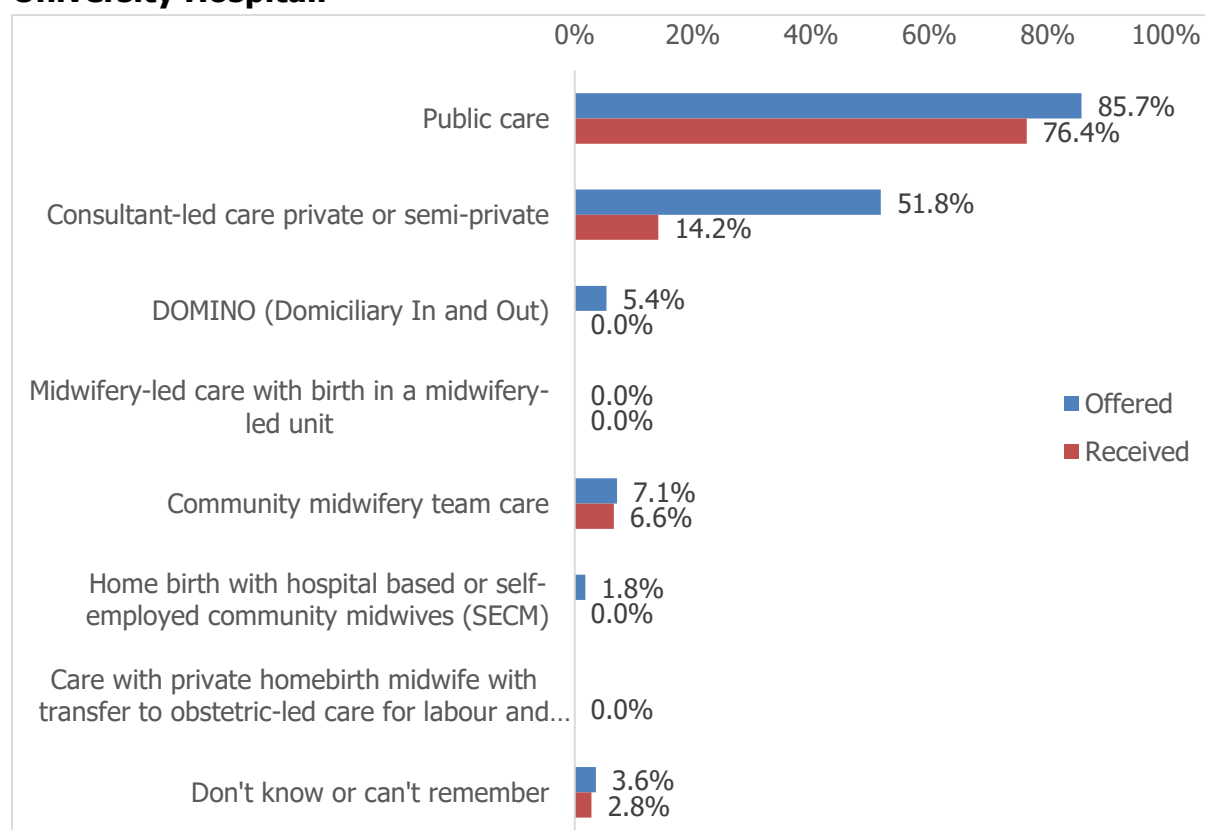

Table 3. Results for questions on antenatal classes or courses attended by women who gave birth in Portiuncula University Hospital.

Q6. During your pregnancy were you offered any antenatal classes or courses?		
	No.	%
Yes, and I did them	45	42.5%
Yes, but I did not do them	48	45.3%
No	12	11.3%
Don't know or can't remember	1	0.9%
Q7. Are there any particular reasons you did not go to antenatal classes or courses?		
It was not my first baby	40	83.3%
It was my first baby but I didn't want to go to classes	1	2.1%
There were no available spaces/they were booked out	4	8.3%
I couldn't find classes that were right for me	1	2.1%
There were no classes near me	1	2.1%
I had other commitments	1	2.1%
Other	4	8.3%

10 questions explored whether women received sufficient information on their health and care, were involved in decisions about their antenatal care and had confidence and trust in their healthcare professionals. These questions were scored out of 10, with the scores for the stage as a whole compared against the national average in Figure 2. Scores for this stage of care are compared by the county of residence of women who gave birth in Portiuncula University Hospital in Figure 3. Scores for the individual questions are compared against the national average in Figure 4.

Women who gave birth in Portiuncula University Hospital rated their antenatal care as about the same as the national average. The highest-scoring question for this stage related to receipt of information on giving up smoking, with 88.6% saying they definitely received enough information about giving up smoking while they were pregnant. The lowest-scoring question related to information about mental health, with 25.5% of women saying they did not receive enough information about changes in their mental health while they were pregnant.

Care during labour and birth

This stage of the survey included three questions where women were asked to describe the birth of their baby and whether they were left alone at any point, with the results for Portiuncula University Hospital shown in Table 4. There were also seven other questions about this stage of care that received scores out of 10. The scores for the stage as a whole are compared against the national average in Figure 5, and for the individual questions in Figure 6.

Women who gave birth in Portiuncula University Hospital rated their care during labour and birth as about the same as the national average. The highest-scoring question for this stage related to involvement of a partner or companion, with 95.1% saying that their partner or companion was as involved as they wanted them to be in the labour and birth. The lowest-scoring question related to involvement in decisions during labour and birth. 15 women (14.4%) said that they were not involved in decisions about their care during labour and birth.

Table 4. Results for questions on induction of labour, type of birth and being left alone.

Q18. Thinking about the birth of your baby, was your labour induced?		
	No.	%
Yes	40	38.1%
No	62	59.0%
Don't know or can't remember	3	2.9%
Q19. What type of birth did you have?		
A vaginal birth (no forceps or ventouse suction cup)	45	43.3%
An assisted vaginal birth (e.g. with forceps or ventouse suction cup)	16	15.4%
A planned caesarean birth	24	23.1%
An unplanned caesarean birth	19	18.3%
Q23. Were you (and/or your partner or companion) left alone by health care professionals at a time when it worried you?		
Yes, during early labour	6	5.7%
Yes, during the later stages of labour	6	5.7%
Yes, during the birth	1	1.0%
Yes, shortly after the birth	7	6.7%
No, not at all	88	83.8%

Figure 5. Comparison of 'Care during labour and birth' scores for Portiuncula University Hospital against the national average.

Figure 6. Comparison of individual question scores for 'Care during labour and birth' in Portiuncula University Hospital against the national average.

Care in hospital after the birth

The questions for this stage related to the care women who gave birth in Portiuncula University Hospital received after the birth of their baby. All of the questions for this stage were given a score out of 10. The scores for the stage as a whole are compared against the national average in Figure 7, and for the individual questions in Figure 8.

Women who gave birth in Portiuncula University Hospital rated their care in hospital after the birth as about the same as the national average. The highest-scoring question for this stage related to being told who to contact after discharge, with 89.7% saying they were told who to contact if they were worried about their own health or their baby's health. The lowest-scoring question related to 'debriefing'. 22 women (24.2%) said that they did not have the opportunity to ask questions about their labour and birth after the baby was born.

Figure 7. Comparison of 'Care in hospital after the birth' scores for Portiuncula University Hospital against the national average.

Figure 8. Comparison of individual question scores for 'Care in hospital after the birth' in Portiuncula University Hospital against the national average.

Specialised care

The questions for this stage explore the experiences of women whose babies required specialist care in a neonatal unit after birth. Women whose baby was not admitted to a neonatal unit did not answer Q38 or Q39. The results for Q37 and Q38 are shown in Table 5. Q39 asked women to rate their experience of the care their baby received in the neonatal unit from 0 to 10 and the results for Portiuncula University Hospital are compared against the national average in Figure 9.

74% of women said that they had a very good overall experience of the care their baby received in the neonatal unit, compared with 70% nationally.

Table 5. Admission to the neonatal unit and emotional support.

Q37. Following the birth, did your baby spend any time in the neonatal unit?		
	No.	%
Yes	19	18.4%
No	84	81.6%
Don't know or can't remember	0	0.0%
Q38. While your baby was in the neonatal unit, did you receive enough emotional support from health care professionals?		
Yes, always	9	47.4%
Yes, sometimes	3	15.8%
No	7	36.8%
I did not want or need any emotional support	0	0.0%
Don't know or can't remember	0	0.0%

Figure 9. Comparison of overall ratings of experiences in the neonatal unit at Portiuncula University Hospital against the national average.

Feeding

This stage included two questions asking women when their health care professionals discussed the different options for feeding their baby, and how they fed their baby in the first few days after birth. The results for these questions are shown in Table 6. The other questions for this stage explored whether women felt supported and respected by healthcare professionals in feeding their baby, both in the hospital and after they had returned home. These questions were scored out of 10, with the scores for the stage as a whole compared against the national average in Figure 10 and individual questions compared against the national average in Figure 11.

Women who gave birth in Portiuncula University Hospital rated the 'Feeding' questions as about the same as the national average. Most women (67.9%) said that their decision about how they wanted to feed their baby were always respected by their health care professionals. The lowest-scoring question for this stage related to support and encouragement, with 11 women (11.5%) saying that they did not get adequate support and encouragement with feeding their baby, while they were in hospital.

Table 6. Results for questions on discussion of feeding options and the methods of feeding used.

Q40. Did your healthcare professionals discuss with you the different options for Feeding?		
	No.	%
Yes, during pregnancy	78	73.6%
Yes, during labour or immediately after birth	32	30.2%
Yes, after birth while in hospital	34	32.1%
Yes, after birth while at home	17	16.0%
No	5	4.7%
I did not want or need discussion of different options	11	10.4%
Don't know or can't remember	2	1.9%
Q41. In the first few days after the birth, how was your baby fed?		
Breast milk (or expressed breast milk) only	41	38.7%
Both breast and formula (bottle) milk	34	32.1%
Formula (bottle) milk only	31	29.2%
Don't know or can't remember	0	0.0%

Figure 10. Comparison of scores for 'Feeding' in Portiuncula University Hospital against the national average.

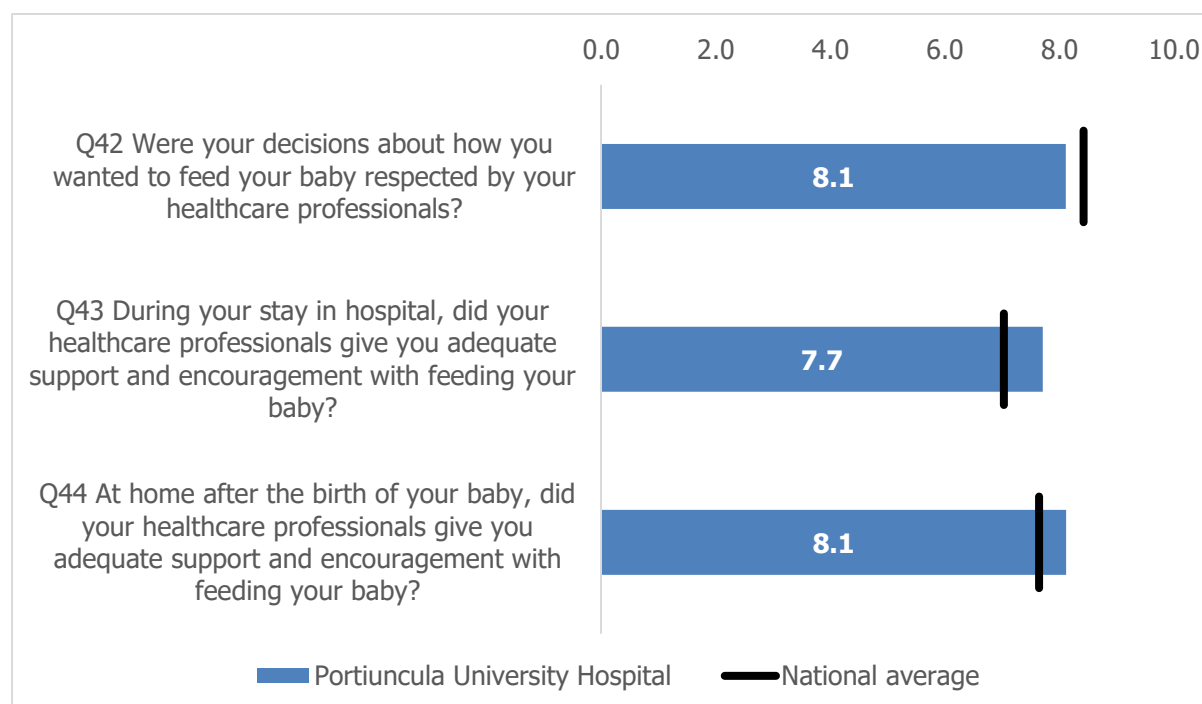

Figure 11. Comparison of individual question scores for 'Feeding' in Portiuncula University Hospital against the national average.

Care at home after the birth

The questions for this stage of maternity care explored women's experiences of postnatal care in the community provided by public health nurses and general practitioners.³ Two questions asked whether women and their babies had been visited at home by a public health nurse and received check-ups with their general practitioner. These appointments are a routine part of postnatal care in Ireland. Another question asked whether women had used local support groups such as mother and baby groups or feeding support groups. The results for these questions for women who gave birth in Portiuncula University Hospital are summarised in Table 7.

The remaining questions for this stage explored women's experiences of the information and support they received at home after the birth of their baby. These questions were scored out of 10, with the scores for the stage as a whole broken down by the county of residence of women who gave birth in Portiuncula University Hospital, and compared against the national average in Figure 12. Scores for the individual questions are compared against the national average in Figure 13.

Women who gave birth in Portiuncula University Hospital rated their care at home after the birth as about the same as the national average. The highest-scoring question for this stage related to being treated with respect and dignity, with 88.6% saying that they were always treated with respect and dignity at home after the birth of their baby. The lowest-scoring question related to the time spent by the GP or practice nurse/midwife discussing mental health at their six-week check-up, with 16.2% of women saying insufficient time was spent discussing their mental health at this check-up. However, this was significantly better than the national average for this question.

³ While the questions for this stage of care do not directly relate to care provided by [Hospital Name], it is important to represent all stages of a woman's maternity care journey in this report.

Table 7. Results for questions on postnatal check-ups and engagement with support groups.

Q46. Since your baby's birth, have you been visited at home by a public health nurse?		
	No.	%
Yes	105	99.1%
No	0	0.0%
Not relevant to my situation	0	0.0%
Don't know or can't remember	1	0.9%
Q50. Did your baby receive a 2-week check-up with your general practitioner (GP)?		
Yes	96	90.6%
No, I did not know about the check-up	3	2.8%
No, I knew about the check-up but did not attend	3	2.8%
I attended another health care professional for the 2-week check-up	1	0.9%
Not relevant to my situation	2	1.9%
Don't know or can't remember	1	0.9%
Q55. Did you use local support groups e.g. mother and baby groups, feeding support groups, etc.		
Yes	24	22.6%
No	81	76.4%
Don't know or can't remember	1	0.9%

Overall experience

Two questions examined women's overall experience of maternity care. The first question asked if they knew how to give feedback or make a complaint. 50 women (47.2%) answered 'yes', while 34 (32.1%) answered 'no'. 22 (20.8%) said they did not wish to give feedback or make a complaint.

Women were also asked to rate their overall maternity experience on a scale from 0 to 10, with 10 being the most positive experience, and 0 the most negative experience. 89% of women who gave birth at Portiuncula University Hospital rated their overall experience as good or very good, compared with the national figure of 85%.

Figure 14 shows the average overall experience ratings for Portiuncula University Hospital compared with the national average.

Figure 14. Comparison of overall maternity experiences scores for Portiuncula University Hospital against the national average.

Focus on: Involvement in decisions, confidence in staff, and respect and dignity

The National Maternity Strategy 2016-2026 emphasises the importance of women being empowered to make decisions about their maternity care, having confidence and trust in health care professionals, and being treated with respect and dignity. This section explores the relationship between these elements and women's overall ratings of the care they received.

Eleven questions on the survey explore involvement in decisions, confidence and trust, and respect and dignity. The average score out of 10 for the relevant questions for women who gave birth in Portiuncula University Hospital are compared

against the national average in Figure 15. The scores for these questions for women who gave birth in Portiuncula University Hospital are presented in Figure 16.

Women who gave birth in Portiuncula University Hospital rated the answers for these questions as about the same as the national average. The highest-scoring question for this stage related to being treated with respect and dignity at home after the birth, with 87.7% saying that they were always treated with respect and dignity at home. The lowest-scoring question related to involvement in decisions, with 55.7% saying they were always involved in decisions about their care during labour and birth, and the remaining women saying that they were only sometimes involved or not involved in decisions.

Figure 15. Comparison of relevant questions for women who gave birth in Portiuncula University Hospital with the national average.

Figure 16. Scores for questions about involvement in decisions, confidence and trust and respect and dignity for women who gave birth in Portiuncula University Hospital.

In their own words: analysis of women's comments

Three survey questions (questions 61-63) asked women to provide additional information, in their own words, on their maternity experiences. These free-text questions allowed women to give a more in-depth description of specific aspects of their maternity care. In total, 194 comments were received from women who gave birth in Portiuncula University Hospital.

Figure 17 shows the breakdown of comments by theme for each of the three open-ended questions. Q61 asked women what was particularly good about their maternity care, Q62 asked women what could be improved, and Q63 asked women if there were any other aspects of their maternity care experience that they would like to describe.

For Q61, most of the comments related to the 'midwives', 'pre-natal/antenatal stage' and 'general staff/other staff' themes. For Q62, most comments related to the 'midwives', 'general comment/other', 'staffing levels/pressure', and 'communication/information sharing' themes. Finally, most responses to Q63 related to the 'consultants and hospital doctors', 'midwives', and communication/information sharing' themes.

Examples of the comments received in response to each free-text question are provided in Figure 18.

Figure 17. Number of participant comments by theme.

Figure 18. Sample comments.

Q61. Positive comments

"Midwife was very helpful and remained with me throughout my section and helped with feeding baby afterwards."

"Very efficient outpatient/antenatal appointments (on time). Frequent doctors' appointments and check-ups reassured me. Hypnobirthing class offered in Portiuncula - a big bonus and very helpful for myself and husband."

"The midwives after birth were brilliant nothing was too much for them... I was in and out of hospital a lot during my pregnancy and I was always treated amazingly. Scans were always done and tests ran for me whenever I was worried to give me peace of mind."

Q62. Suggestions for improvement

"Breastfeeding challenges should be discussed i.e. initial difficulties and how these improve and get easier with time. Challenges of dealing with a new baby should be focused on so mums know what to expect and what is normal."

"I attended the Gestational Clinic every 2 weeks. It's always appeared to be overbooked and waiting times up to 2 hrs. The care received was excellent but waiting was difficult particularly towards the end of the pregnancy."

"Although they did their absolute best for me I felt at times the midwives were under a lot of pressure due to staffing."

Q63. Other comments

"More emphasis needs to be put on more frequent scans. Also women who are sick during pregnancy and need hospitalisation in maternity ward, like myself there is no separate ward and you are put in with new mothers and babies."

"I just want to say the whole experience and the standard of care received were second to none and the fantastic staff are to thank for that. There is a lovely atmosphere and I would have no hesitation in recommending the hospital."

"I just want to say that the public health nurses at the [Location] primary care centre have been extremely helpful and supportive over these last three months."

Conclusion

What were women's experiences of maternity care in Portiuncula University Hospital in October 2019?

Most of the participants who gave birth in Portiuncula University Hospital has a positive experience of maternity care, with 89% saying they had a good or very good overall experience, compared with the national score of 85%.

Across each stage of care from antenatal care through to postnatal care at home, women who gave birth in Portiuncula University Hospital rated their care as similar to the national average. 54% of women who gave birth in Portiuncula University Hospital said that they were offered a choice of the type of maternity care they would receive.

Women who gave birth in Portiuncula University Hospital gave above-average ratings of the information they received on nutrition, and the impact of alcohol or drug abuse during pregnancy. In addition, most women who gave birth in Portiuncula University Hospital said that their GP or practice nurse/midwife gave clear answers to their questions at their postnatal check-up.

The lowest-scoring questions for Portiuncula University Hospital related to the emotional support women received while their baby was in the neonatal unit, with some women saying that they did not receive sufficient emotional support. In addition, some women said that they did not receive sufficient information about changes in their mental health while they were pregnant. Finally, a number of women said that they were not given the opportunity to ask questions about their labour and birth.

The responses to the three free-text questions provided very detailed information on women's experiences while in Portiuncula University Hospital and the maternity care they received in the community before and after giving birth. These comments identified the caring and helpful attitudes of health care professionals, particularly in the antenatal stage, but also highlighted the difficulties that some women experienced in accessing help when they needed it.

The findings of the National Maternity Experience Survey will be used by Portiuncula University Hospital and community maternity care providers in the area to improve the maternity experiences of women who give birth in the hospital.

Appendix 1: Areas that scored above or below the national average

Improvement map

It is important for maternity care providers to know if they scored above or below the national average for each question, and this is shown in the improvement map in Figure 19. The improvement map also shows which questions are related to patients' overall experience in hospital. Some questions had a stronger relationship with overall experience than others.

For example, Question 36, which asked women if they were treated with respect and dignity while in hospital had a strong relationship with overall experience. This means that women who said they were treated with respect and dignity were very likely to give a positive rating of their overall experience. Women who felt they were not treated with respect and dignity tended to give more negative ratings of their overall experience.

Other questions had a weaker relationship with overall experience – this means that patients' experiences in these areas had little bearing on how they rated their overall experience. An example is Question 49, which asked women if they received help and advice from the public health nurse about their baby's health and progress. The relationship between receiving this help and advice, and women's ratings of their overall experience was weak. This means that even if women received help and advice on their baby's health they may have given negative ratings of their overall experience, or if they did not receive help and advice, women may still have given positive ratings of their overall experience.

It is useful for maternity care providers to know which questions strongly relate to their patients' overall experience as these are the areas on which they should focus their improvement efforts.

In Figure 19, each dot shows a specific survey question Portiuncula University Hospital. Questions at the top of the graph are strongly related to overall experience, while those at the bottom have a weaker relationship. Questions to the right of the graph scored below the national average, while those on the left scored above it.

The improvement map for each hospital is unique and gives specific information on where a hospital is doing well, and areas where improvements are needed. An interactive version of the improvement map is also available at <http://www.yourexperience.ie/>, along with instructions on how to interpret it.

Appendix 2: Description of models of maternity care

There are multiple types of maternity care, often described as 'models' of maternity care, available across Ireland. Each model of maternity care involves a varied mix of maternity services and health care professionals. These models of care, and where they are provided, are described in detail below.

Public care

Also known as combined care or shared care. Regular antenatal check-ups with midwives and or obstetricians in the hospital and, in most cases, with your General Practitioner (GP). Labour and birth in the hospital. Postnatal care in a public ward in the hospital with subsequent postnatal check-ups in a community setting.

Consultant-led care private or semi-private

Antenatal check-ups with a private obstetrician (chosen by the women) with the option of sharing these with a GP as part of combined/shared care if you choose. Labour and birth in the hospital with care provided by your obstetrician/an obstetrician's team and hospital midwives. Postnatal care in a private or semi-private ward in the hospital with subsequent postnatal check-ups in a community setting.

DOMINO (Domiciliary In and Out)

Antenatal check-ups with one midwife or a small team of midwives in the hospital or in a community setting, with the option of sharing these antenatal checks-ups with a GP as part of combined/shared care. Labour and birth in the hospital. Transfer home within 12-24 hours after birth. Postnatal care in a public ward in the hospital with subsequent postnatal check-ups in a community setting.

Midwifery-led care with birth in a midwifery-led unit (Cavan General and Our Lady of Lourdes Hospital Drogheda only)

Antenatal check-ups with a midwife or a small team of midwives in a midwifery-led unit or in a community setting. Labour and birth in a midwifery-led unit. Postnatal care in a midwifery-led unit with subsequent postnatal check-ups in a community setting.

Community midwifery team care

Antenatal check-ups with a midwife or a small team of midwives in the hospital or in a community setting, with the option of sharing these antenatal check-ups with a GP as part of combined/shared care. Labour and birth in the hospital. Postnatal care in a public ward in the hospital with subsequent postnatal check-ups in a community setting.

Home birth with hospital based or self-employed community midwives (SECM)

Antenatal check-ups at home or in a community setting with either a hospital-based or self-employed community midwife (chosen by the women). Labour and birth at home with care provided by a midwife. Postnatal care in a community setting.
